

Internal Hotspot Monitoring Weekly Report for 2022

DEC2022_WK03

12 December 2022 – 18 December 2022
Malaysia & Indonesia

Overview

1. P&C 2018 & RSPO ISH Standard 2019 – Related Criteria
2. Weekly Analysis
 - i. Comparison to 2021: All Hotspots in MY & ID
 - ii. Comparison to 2021: Hotspots within RSPO Member Concession
 - iii. Weekly trend from the last 10 weeks
3. Weekly Hotspot Map
 - i. Hotspot Distribution Map
 - ii. Hotspot Distribution by Peatlands and Landuse Map
 - iii. Hotspot Persistency Map
4. Hotspots for DEC2022_WK03
 - i. RSPO vs. non-RSPO comparison – MY & ID
 - ii. Hotspots Distribution by States/Region - MY & ID
 - iii. Hotspots in RSPO members (State/Province)
5. ASEAN Weather Outlook

RSPO Principles & Criteria 2018

Related Criteria

There is **no use of fire for pest control** unless in exceptional circumstances

7.1.3

Criteria 7.1

The unit of certification **does not use open fire for waste disposal.**

7.3.3

Criteria 7.3

The unit of certification **establishes fire prevention and control measures** for the areas directly managed by the unit of certification

7.11.2

Criteria 7.11

RSPO ISH Standard 2019 - Related Criteria

Smallholders complete training on best management practices (BMPs) for peat. The group has an **action plan to minimise risk of fire**, to apply BMPs for planting on peat and manage water systems in the certification unit.

4.4 MSA

Criteria 4.4

Smallholders **implement** the group's **action plan based on BMPs**, including **fire** and water management, and monitoring of subsidence rate for existing planting on peat.

4.4 MSA

Criteria 4.4

Fire is not used on the oil palm plot **for preparing land** or for **pest control**, nor open fire for **waste management** on the farm.

4.6 E,
4.6 MSA,
4.6 MSB

Criteria 4.6

Weekly Analysis

Comparison to 2021 trend
Comparison to previous 10 weeks

Comparison to 2021: All hotspots

The number of hotspots for next week (Dec 2022: 4th week) is predicted to be **increase** in the region as compared to 2021 hotspot trend

Comparison to 2021: Hotspot within RSPO Member Concession

The number of hotspots within RSPO member is expected to be **higher** for next week (Dec 2022: 4th week) as compared to 2021 hotspot trend.

Weekly trend from last 10 weeks

Higher in hotspot count than previous week

12 December 2022 – 18 December 2022

(Sumatera & Kalimantan) Region

RSPO vs non-RSPO comparison

Non-RSPO oil palm concession location data was derived from oil palm concessions dataset accessed through Global Forest Watch on 17/11/2022. www.globalforestwatch.org. The website states that this layer is a compilation of concession data from various countries and sources. The quality of these data can vary depending on the source. This layer may not include all existing concessions in a country, and the location of certain concessions can be inaccurate.

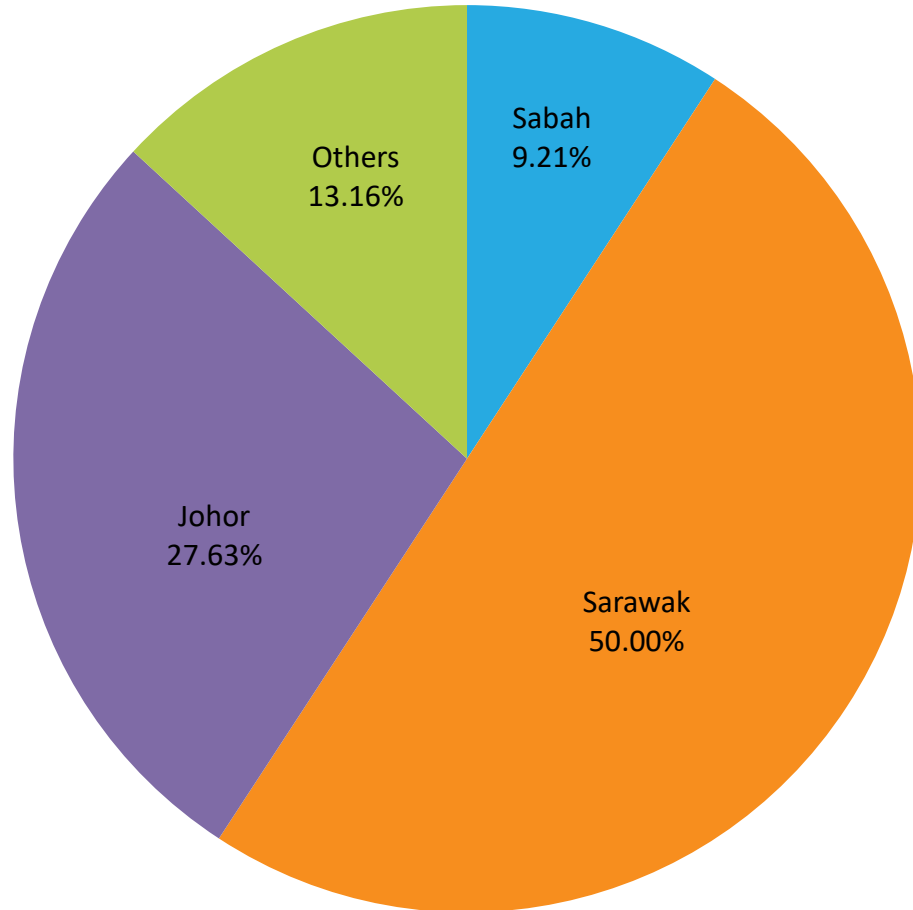

As such the data probably overstates the extent of oil palm plantations in some cases, as there are many licenses granted and the oil palm plantation has not been developed. In other cases, it may understate the extent of plantations as it does not take into account smallholders. Nevertheless, this appears to be the best data available of ALL oil palm in Indonesia.

The RSPO concession boundary data was overlaid with this data in the GIS and RSPO concessions were “clipped” out of this data, leaving only “non-RSPO” concessions.

Non-RSPO*: ~19,000,000 ha

RSPO: ~ 4,500,000 ha

Distribution of Hotspots by State in Malaysia

STATE	TOTAL
Terengganu	0
Pahang	0
Sabah	7
Others	10
Johor	21
Sarawak	38
Total	76

Distribution of Hotspots by Region in Indonesia

REGION	TOTAL
Riau	6
West Kalimantan	16
South Kalimantan	19
East Kalimantan	23
Jambi	35
Central Kalimantan	47
South Sumatera	52
Others	120
Total	318

Hotspots in RSPO members (State/Province)

No. of Member/s	Date of Acquisition	District / Regency	Province / State	Country	No. of Hotspots	Total no. of Hotspots
1	12-Dec-22	West Kutai	East Kalimantan	Indonesia	1	1
1	12-Dec-22	Seruyan	Central Kalimantan	Indonesia	1	2
	17-Dec-22	Musi Rawas	South Sumatra		1	
1	12-Dec-22	Sekadau	West Kalimantan	Indonesia	1	1
1	12-Dec-22	Katingan	Central Kalimantan	Indonesia	1	1
1	16-Dec-22	Musi Rawas	South Sumatra	Indonesia	1	1
1	17-Dec-22	Ulu Tiram	Johor	Malaysia	1	1
6				Total Hotspots		7

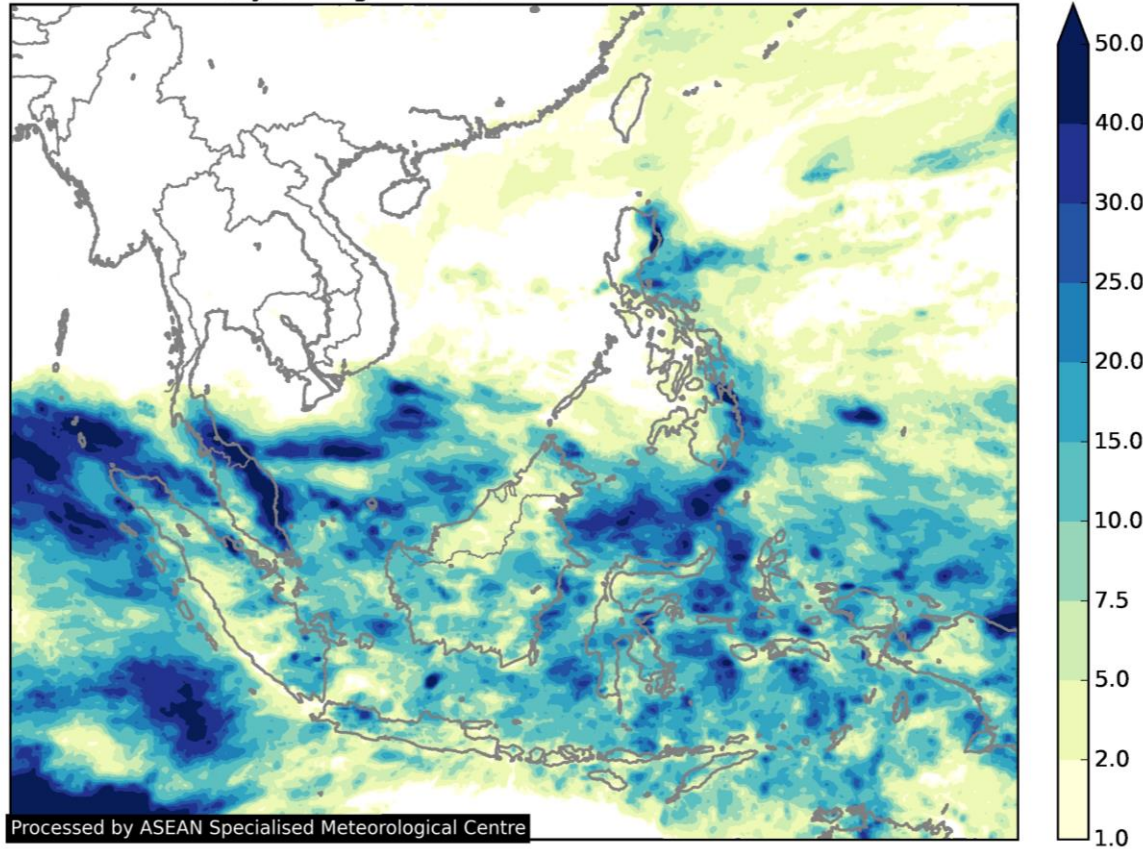

ASEAN Weather Outlook

Source: The ASEAN Specialised Meteorological Centre

Regional Weather & Haze Outlook

GsMaP Daily Average Rainfall from 2022-12-12 to 2022-12-18

Processed by ASEAN Specialised Meteorological Centre

Alert Level

- LEVEL 0** Stay vigilant.
- LEVEL 1** Dry season for the Northern ASEAN region.
- LEVEL 2** Exceeding 150 hotspots in 2 consecutive days in Northern ASEAN with dense smoke plumes; dry weather persisting; and prevailing winds blowing from the Mekong sub-region. Increasing risk of transboundary haze in the region.
- LEVEL 3** Significant and persistent hotspot activities with widespread moderate to dense smoke haze observed over 2 or more consecutive days; dry weather persisting; and prevailing winds blowing towards ASEAN countries.

Over the past week, periods of dry weather were observed over many parts of the northern ASEAN region.

With drier conditions expected to prevail over much of the northern ASEAN region in the coming weeks, increased hotspot activity and smoke haze development can be expected. The traditional dry season is expected to persist until April/May 2023.

The weather was mostly dry and cloudy over much of the Mekong sub-region as the traditional dry season began for the northern ASEAN region. Elsewhere in the ASEAN region, rainy weather prevailed and hotspot activity was subdued.

In the coming days, the weather is forecast to be dry over much of the Mekong sub-region. Under the persistent dry conditions, a gradual increase in hotspot activity and occasional smoke haze can be expected over the fire-prone areas in the sub-region. Elsewhere in the ASEAN region, hotspot activity is likely to remain subdued with rainy weather expected to continue.

Alert by RSPO:

For the following week, RSPO Secretariat would like to recommend the following measures to Members:

DRY SEASON area

(as Northern ASEAN region has been observed and expected)

- Please alert to the Fire Danger Rating System (FDRS) indicator board especially in the fire prone area
- Supply appropriate well-maintained fire mitigation tools (fire extinguisher, fire truck)
- Establish of fire break (wide road, vacant land) within the planted area
- Inform workers and communities about the fire drill procedure
- Minimize outdoor activities and stay hydrated if the haze season occurred

Integrated Fire Management
Training conducted by PT Austindo
PT Austindo Nusantara Jaya Agri

WET WEATHER area

(as forecast for southern ASEAN region)

- High risk of surface runoff in the estate area which may result in erosion and landslide
- Stay vigilant of water level and keep informed on local news of the flood in high-risk area
- Tendency for the formation of road potholes, which may necessitate additional maintenance and repair costs.
- Stay inside during thunderstorms and blizzards. Stay off the landline phone and computer during a storm.
- Wear appropriate rain gear for employees working in the rain
