Internal Hotspot Monitoring Weekly Report for 2023

Week 2 – July 2023

10 July – 16 July 2023 Malaysia & Indonesia

Overview

- 1. P&C 2018 & RSPO ISH Standard 2019 Related Criteria
- 2. Weekly Analysis
 - i. Comparison to 2022: All Hotspots in MY & ID
 - ii. Comparison to 2022: Hotspots within RSPO Member Concession
 - iii. Weekly trend from the last 10 weeks
- 3. Weekly Hotspot Map
 - i. Hotspot Distribution Map
 - ii. Hotspot Distribution by Peatlands and Landuse Map
 - iii. Hotspot Persistency Map
- 4. Hotspots for Week 2 July 2023
 - i. RSPO vs. non-RSPO member comparison
 - ii. Hotspots Distribution by States/Region
 - iii. Hotspots in RSPO members (State/Province)
- 5. ASEAN Weather Outlook

RSPO Principles & Criteria 2018

Related Criteria

RSPO ISH Standard 2019

Related Criteria

Smallholders complete training on best management practices (BMPs) for peat. The group has an **action plan to minimise risk of fire**, to apply BMPs for planting on peat and manage water systems in the certification unit. Smallholders **implement** the group's **action plan based on BMPs**, including **fire** and water management, and monitoring of subsidence rate for existing planting on peat. Fire is not used on the oil palm plot for preparing land or for pest control, nor open fire for waste management on the farm.

RSPO vs non-RSPO comparison

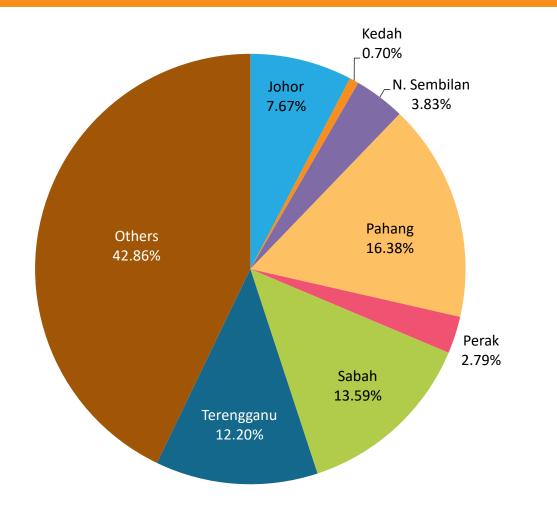

Non-RSPO oil palm concession location data was derived from oil palm concessions dataset accessed through Global Forest Watch on 17/11/2022. <u>www.globalforestwatch.org</u>. The website states that this layer is a compilation of concession data from various countries and sources. The quality of these data can vary depending on the source. This layer may not include all existing concessions in a country, and the location of certain concessions can be inaccurate.

As such the data probably overstates the extent of oil palm plantations in some cases, as there are many licenses granted and the oil palm plantation has not been developed. In other cases, it may understate the extent of plantations as it does not take into account smallholders. Nevertheless, this appears to be the best data available of ALL oil palm in Indonesia.

The RSPO concession boundary data was overlaid with this data in the GIS and RSPO concessions were "clipped" out of this data, leaving only "non-RSPO" concessions.

Non-RSPO*: ~19,000,000 ha RSPO: ~ 4,800,000 ha

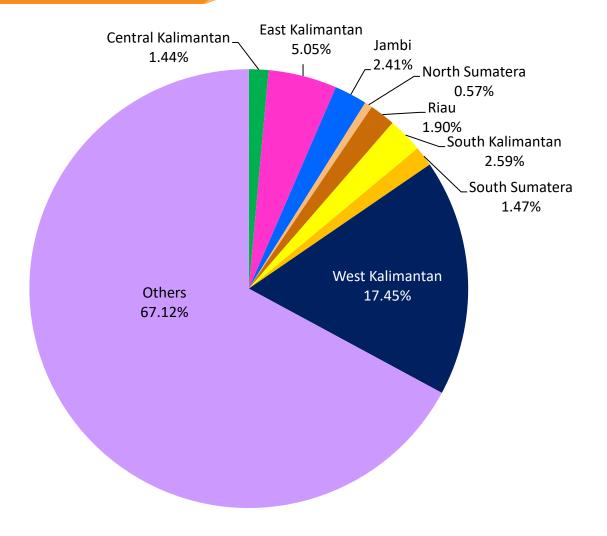

Distribution of Hotspots by State in Malaysia

STATE	TOTAL
Johor	22
Kedah	2
N. Sembilan	11
Pahang	47
Perak	8
Sabah	39
Terengganu	35
Others	123
Total	287

Distribution of Hotspots by Region in Indonesia

REGION	TOTAL		
Central Kalimantan	48		
East Kalimantan	168		
Jambi	80		
North Sumatera	19		
Riau	63		
South Kalimantan	86		
South Sumatera	49		
West Kalimantan	580		
Others	2,231		
Total	3,324		

Hotspots in RSPO members (State/Province)

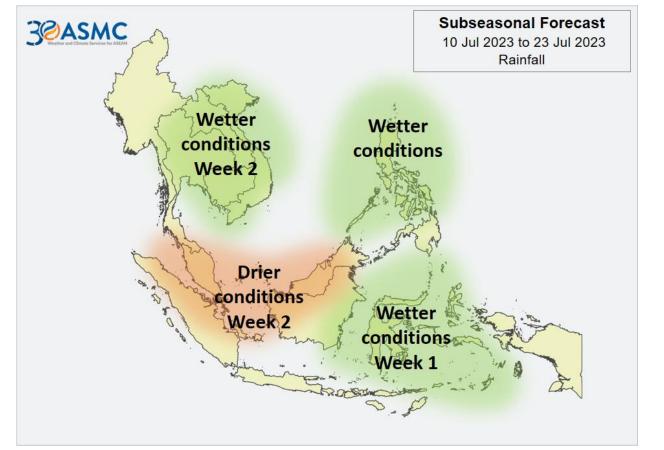

No. of Member/s	Date of Acquisition	District / Regency	Province / State	Country	No. of Hotspots	Total no. of Hotspots
1	12-Jul-23	East Kotawaringin	Central Kalimantan	Indonesia	1	1
	12-Jul-23	Ketapang Sanggau			1	
	13-Jul-23				2

1	16-Jul-23	Sanggau	West Kalimantan	Indonesia	1	1
6				Total Hotspots		14

ASEAN Weather Outlook

Source: The ASEAN Specialised Meteorological Centre

Regional Weather & Haze Outlook

Drier conditions persisted over many parts of the ASEAN region, except over the a few parts Mekong sub region and Philippines, where wet weather conditions were observed under the influence of Tropical Storm Talim in the South China Sea.

Over the next few days, wet weather is forecast over most parts of the ASEAN region with heavier rainfall expected over the southern coast of the Mekong sub- region. Hotspot and smoke haze activities may increase over parts of western Borneo, Java and the Lesser Sunda Islands where drier conditions are expected in the coming days.

Southwest Monsoon conditions have been gradually established over the southern ASEAN region, with the prevailing winds blowing predominantly from the southeast or southwest. Over the past week, dry weather persisted over many parts of the region, and isolated hotspots with occasional smoke plumes were observed.

Over the next several months, extended periods of dry weather can be expected over many parts of the southern ASEAN region. The likely return of El Niño conditions in the second half of the year will further exacerbate the dry season and extending it into October 2023. An escalation in hotspot activity and smoke haze development can be expected during this period, with an increased risk of transboundary haze occurrence.

Alert by RSPO: Transboundary Haze (Level 1)

For the following week, RSPO Secretariat would like to recommend the following measures to Members:

Dry Season Area (Many parts of <u>Southern ASEAN Region</u> ; especially at Borneo, Java & Lesser Sunda Islands)	Wet Weather Area (as forecast for over <u>Northern ASEAN region)</u>
 Please alert to the Fire Danger Rating System (FDRS) indicator board especially in the fire prone area Supply appropriate well-maintained fire mitigation tools (fire extinguisher, fire truck) Establish of fire break (wide road, vacant land) within the planted area Inform workers and communities about the fire drill procedure Minimize outdoor activities and stay hydrated if the haze season occurred If haze occurred, wear respirator mask if outdoor activities is necessary. 	 High risk of surface runoff in the estate area which may result in erosion and landslide Stay vigilant of water level and keep informed on local news of the flood in high-risk area Tendency for the formation of road potholes, which may necessitate additional maintenance and repair costs. Stay inside during thunderstorms and blizzards. Stay off the landline phone and computer during a storm. Wear appropriate rain gear for employees working in the rain
