Internal Hotspot Monitoring Weekly Report for 2023

Week 2 – May 2023

08 May – 14 May 2023 *Malaysia & Indonesia*

Overview

- 1. P&C 2018 & RSPO ISH Standard 2019 Related Criteria
- 2. Weekly Analysis
 - i. Comparison to 2022: All Hotspots in MY & ID
 - ii. Comparison to 2022: Hotspots within RSPO Member Concession
 - iii. Weekly trend from the last 10 weeks
- 3. Weekly Hotspot Map
 - i. Hotspot Distribution Map
 - ii. Hotspot Distribution by Peatlands and Landuse Map
 - iii. Hotspot Persistency Map
- 4. Hotspots for Week 2 May 2023
 - i. RSPO vs. non-RSPO member comparison
 - ii. Hotspots Distribution by States/Region
 - iii. Hotspots in RSPO members (State/Province)
- 5. ASEAN Weather Outlook

RSPO Principles & Criteria 2018

Related Criteria

The unit of The unit of There is **no use of** certification **does** certification fire for pest establishes fire control unless in not use open fire prevention and exceptional for waste control measures disposal. circumstances for the areas directly managed by the unit of certification 7.3.3 7.1.3 7.11.2 Criteria 7.11 Criteria 7.1 Criteria 7.3

RSPO ISH Standard 2019

Related Criteria

Smallholders complete training on best management practices (BMPs) for peat. The group has an **action plan to minimise risk of fire**, to apply BMPs for planting on peat and manage water systems in the certification unit. Smallholders **implement** the group's **action plan based on BMPs**, including **fire** and water management, and monitoring of subsidence rate for existing planting on peat.

Fire is not used on the oil palm plot for preparing land or for pest control, nor open fire for waste management on the farm.

RSPO vs non-RSPO comparison

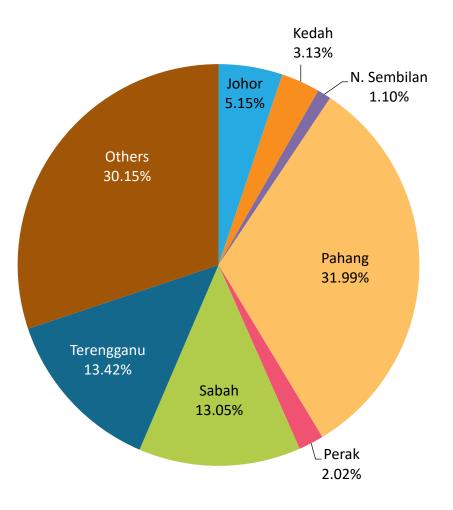

Non-RSPO oil palm concession location data was derived from oil palm concessions dataset accessed through Global Forest Watch on 17/11/2022. <u>www.globalforestwatch.org</u>. The website states that this layer is a compilation of concession data from various countries and sources. The quality of these data can vary depending on the source. This layer may not include all existing concessions in a country, and the location of certain concessions can be inaccurate.

As such the data probably overstates the extent of oil palm plantations in some cases, as there are many licenses granted and the oil palm plantation has not been developed. In other cases, it may understate the extent of plantations as it does not take into account smallholders. Nevertheless, this appears to be the best data available of ALL oil palm in Indonesia.

The RSPO concession boundary data was overlaid with this data in the GIS and RSPO concessions were "clipped" out of this data, leaving only "non-RSPO" concessions.

Non-RSPO*: ~19,000,000 ha RSPO: ~ 4,800,000 ha

Distribution of Hotspots by State in Malaysia

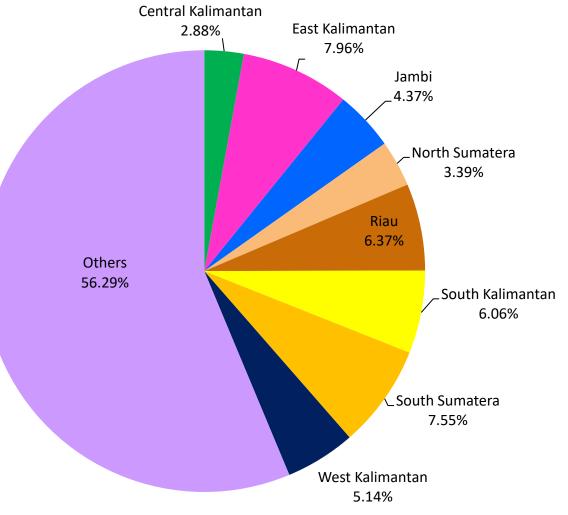

STATE	TOTAL		
Johor	28		
Kedah	17		
N. Sembilan 6			
Pahang	174		
Perak	11		
Sabah 71			
Terengganu	73		
Others	164		
Total	544		

08 May 2023 – 14 May 2023

Distribution of Hotspots by Region in Indonesia

REGION	TOTAL
Central Kalimantan	56
East Kalimantan	155
Jambi	85
North Sumatera	66
Riau	124
South Kalimantan	118
South Sumatera	147
West Kalimantan	100
Others	1,096
Total	1,947

Hotspots in RSPO members (State/Province)

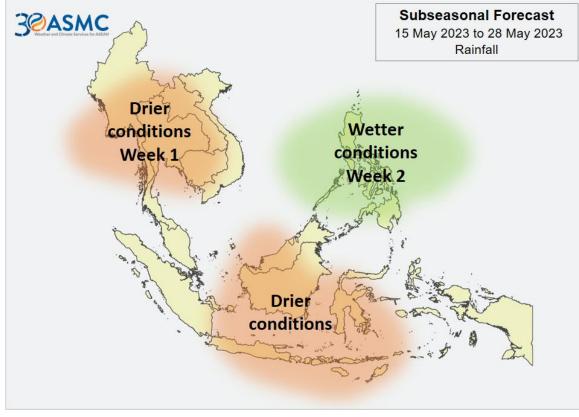

No. of Member/s	Date of Acquisition	District / Regency	Province / State	Country	No. of Hotspots	Total no. of Hotspots

ASEAN Weather Outlook

Source: The ASEAN Specialised Meteorological Centre

Regional Weather & Haze Outlook

Widespread showers fell over many parts of the Mekong sub-region and the showers helped subdue the overall hotspot and haze situation. There were also strong winds and widespread showers near Myanmar under the influence of Tropical Cyclone Mocha, which was located over the Bay of Bengal. Isolated showers were observed over the southern ASEAN region, except for parts of Peninsular Malaysia, Singapore, Sumatra western Borneo and Java where it was relatively dry.

In the coming days, dry weather is expected over northern and central parts of the Mekong sub-region, as well as Java and the Lesser Sunda Islands, while scattered showers are forecast elsewhere in the ASEAN region.

With an increase in shower activities over many parts of the Mekong sub-region in recent days, there has been further improvement to the overall hotspot and haze situation in the sub-region.

In the coming days, more showers are expected over the Mekong sub-region. Some areas in the northern and western parts of the sub-region may still experience brief periods of drier weather and hotspot activity. However, the risk of transboundary haze is assessed to be low due to rainy conditions and prevailing winds that are generally light and variable in direction.

Alert by RSPO: Transboundary Haze (Level 1)

For the following week, RSPO Secretariat would like to recommend the following measures to Members:

Dry Season Area (<u>Northern ASEAN region; especially at Mekong sub-region, Java and Lesser</u> <u>Sunda Islands)</u>	Wet Weather Area (as forecast for <u>Southern ASEAN region)</u>
 Please alert to the Fire Danger Rating System (FDRS) indicator board especially in the fire prone area Supply appropriate well-maintained fire mitigation tools (fire extinguisher, fire truck) Establish of fire break (wide road, vacant land) within the planted area Inform workers and communities about the fire drill procedure Minimize outdoor activities and stay hydrated if the haze season occurred If haze occurred, wear respirator mask if outdoor activities is necessary. 	 High risk of surface runoff in the estate area which may result in erosion and landslide Stay vigilant of water level and keep informed on local news of the flood in high-risk area Tendency for the formation of road potholes, which may necessitate additional maintenance and repair costs. Stay inside during thunderstorms and blizzards. Stay off the landline phone and computer during a storm. Wear appropriate rain gear for employees working in the rain
