A palm oil based emulsifier is used as processing aid for production of dehydrated potato flakes, where a little emulsifier is added to the dough to ensure the sheet of dehydrated potato flakes does not stick to the drum and comes loose after drying.

Phasing out palm since 2012 as our main frying oil for health reasons. Palm oil contains 50% saturated fat versus only 10-12% in sunflower or rapeseed oil. And palm oil contains relatively high levels of the process contaminants 2,3-MCPD esters and glycidyl esters.

Actions for Next Reporting Period****5.1 Outline actions that you will take in the coming year to promote the use of RSPO-certified sustainable palm oil and oil palm products along the supply chain.**

We observe insufficient mainstream consumer awareness for CSPO and no interest at all from customers, being mainly in the Out-of-Home market segment.

As we have done in the past 6 years, we have included a paragraph on RSPO certified sustainable palm oil in our latest sustainability report. We promote CSPO whenever applicable during presentations to customers and at stakeholders events and promote RSPO and urgency to move to 100% SG CSPO within our EU sector.
