## Summary Report of Planning & Management of PT Gunajaya Ketapang Sentosa Ketapang District, West Kalimantan Province

---

### 1. Executive Summary

This Executive Summary fulfills the RSPO New Planting Procedures Format “Summary Report of Planning & Management” (RSPO latest revision of 05-05-10).

PT GKS is situated in Kendawangan Sub-District, Ketapang District – West Kalimantan Province. The Permitted Area (Izin Lokasi) No. 292 dated 03-10-2006 (size ± 12,890 Ha).

The Consent License based Cultivate Right title (HGU) No 85/HGU/BPN RI/2011 was Conservation Values Identification (HCV) and Social Impact Assessment (SIA) from 12 – 18 April 2011 by independent consultants from Bogor Agricultural Institute who has been accredited and approved by RSPO.

The results of the HCV assessment by independent consultants from IPB who has been accredited and approved by RSPO have shown that there is no primary forest in the Permitted Area (Izin Lokasi) of PT GKS. The vegetation's cover dominated by the herb (36.21%), trees, liana, epifit, and bamboo.

Scope HCV assessment consists of company that conducted the permitted area based on 12,890 ha. As for potential HCV areas, there were five types of HCV were identified by Faculty of Forestry, Bogor Agricultural Institute; these are HCV 1 (1.1, 1.2 & 1.3), HCV 4 (4.1), and HCV 6. The original HCV area identified was ± 19.56 ha (1.15 % of the permitted area or 1.59% of the total Land right title).

The results of the Social Impact Assessments (SIA) have shown that the company's development of oil palm plantation and palm oil mill production has significant and positive impacts toward local livelihood and the society's social sustainability. The findings have defined how the company's business management can influence the key issues in the respective component of the social sustainability of the local community. There are described in the three basic components for society's social sustainability that influences the planning of future company's operation.

The findings on both the HCV and SIA by independent consultants from Bogor Agricultural Institute who has been accredited and approved by RSPO have been incorporated in the oil palm development plan of PT GKS which includes the HCV and SIA management and monitoring plans of PT GKS. Development of the HCV and SIA management and monitoring plans was facilitated by IPB team. The purpose of the workshop on HCV - SIA management and monitoring program for PT GKS was to enable the management team to have a better understanding of the HCV and SIA findings and their related implications so as to provide reference points in developing the operational activities of the company related to the HCV, social managements synergy with the company's development of oil palm plantation.

## 2. Reference Documents

### 2.1 The reference documents are as follow:

1. Environment Monitoring & Management Document (DPPL) was approved by Governor of West Kalimantan Decree number 562/BLHD/2010 dated 13-12-2010
2. The HCV Identification document is in the report “HCV Assessment report for PT Gunajaya Ketapang Sentosa, October 2012 by Bogor Agricultural Institute”,
3. The Peer review HCV Identification document is in the report “HCV Assessment report for PT Gunajaya Ketapang Sentosa, August 2012 by Kunkun Jaka Gurmaya”,
4. The SIA report is in “(SIA Assessment report for PT Gunajaya Ketapang Sentosa, October 2012 by Bogor Agricultural Institute”
5. The management and monitoring plans for HCV in the “The Management & Monitoring Plans of HCV PT GKS, October 2012 by Bogor Agricultural Institute
6. The management and monitoring plans for SIA in the “The Management & Monitoring Plans of Social PT GKS, approved in October 2012”,
7. The development plan of PT GKS.

### Brief summary of the above

Based on social environment assessment, the positive and negative impacts of the operational activities of PT GKS have been identified. The key positive impacts include enhancing the income of the communities and providing more job opportunities to the local communities with the development of oil palm plantations in the area. Possible negative impacts are threats to the ecology as well as potential conflicts of workforce, socio-cultural balances and land tenure.

In addition to the SEIA assessments, PT GKS has also conducted independent high conservation values assessments and social impact assessments involving external experts, Bogor Agricultural Institute; the key consultants conducting these assessments have been accredited and approved by RSPO. Based on the assessments, PT GKS has developed management and monitoring plans to mitigate any negative impacts and enhance the positive ones. Management and monitoring of social and environmental impacts are based on the operational activities that can cause impacts during the development as well as during the operational stages. Potential impacts and other negative impacts as perceived by the communities arising from PT GKS the new activities were also identified by the external consultants. By implementing sound social and environmental management practices, it is expected that these conflicts, both of ecology or social, can be minimized and the relationship between the company and local communities can be preserved and harmonized.

The results of the HCV assessment by independent consultants from IPB who has been accredited and approved by RSPO have shown that there is no primary forest in the Permitted Area (Izin Lokasi) of PT

# RSPO

GKS. The vegetation's cover dominated by the the herb (36.21%), trees, liana, epifit, and bamboo.

As for potential HCV areas, five types of HCV were identified by Faculty of Forestry, Bogor Agricultural Institute; these are HCV 1 (1.1, 1.2 & 1.3), HCV 4 (4.1), and HCV 6. The original HCV area identified was  $\pm$  19.56 ha (1.15 % of the permitted area or 1.59% of the total Land right title). The important elements for HCV 1 *and* 4 are the existence *riparian* and *swamp*. The important elements for HCV 6 are related maintaining the cultural identity of local communities.

## 2.2 List of Legal Documents and Regulatory Permits Related to the Areas Assessed

The permits that have been obtained by the company are inclusive of Consent License (Izin Prinsip), Environment Management & Monitoring Document (DPPL), and the Plantation Permit (Izin Usaha Perkebunan). The followings are the list of the licenses and recommendations:

## 4. Summary Planning for Environment, Social Impact Assessment and High Conservation Value

### 4.1 Social Impact Assessment Planning Management

#### Stakeholders to be involved

The process of the HCV and SIA development and preparation of management plans and monitoring PT GKS also involved relevant stakeholders such as local communities, the government of local village and Sub-District.

Consultation with the relevant stakeholders to provide opportunities for communication and sharing the informations/opinion/suggestions between the PT GKS and stake holder. Focus Group Discussion consisted of people who were respondents (the workers, local communities and local government).

#### Key Issues raised for discussion during the Stakeholders' Meeting include:

Important issues that are related to sustainable development of oil palm plantations in PT GKS, Ketapang District, west Kalimantan Province in stakeholder consultation activities, are:

- 1) Socialization activity need to be continuously carried out in transparent way, so that local communities are aware of the overall development plan of PT GKS.
- 2) Land acquisition (and compensation) procedure are to be carried out with FPIC, When any problems occur, it must be settled with agreement of parties concerned.
- 3) Local community in Permitted Area of PT GKS hoped that the development of palm oil plantation will bring positive impacts and minimize negative impacts from palm oil plantation on development of environment (HCV), social (SIA) and DPPL aspects.
- 4) Village community in Permitted Area of PT GKS hoped that the company be managed in good way and in accordance with RSPO P&C as the sustainable palm oil plantation and maintain good coordination among the stakeholders (company, community, NGO and government).

**Table 4.** Summary of Management and Mitigation Plans on Social Impact Assessment

No.	Program	Activities	Strategic	Output	Timeline

## 4.3 Summary of Management and Mitigation Plans of High Conservation Value (HCV)

### **The HCV development and preparation of management & monitoring plans**

The HCV development and preparation of management & monitoring plans was based on the result of the HCV assessment which was administered in October 2012 by independent consultants from IPB who has been accredited and approved by RSPO. This process provides data and information related to the presence of the HCV areas in the permitted area (Ijin Lokasi) of PT GKS, the key HCV elements, the actual conditions included the potential threats, and the recommendations for the management.

The HCV development and preparation of management & monitoring plans was implemented with the aim to provide guideline for the company in planning and management of its programs or activities in managing the HCV present within the concession area. The purpose was to enable all the available resources to be focused, integrated and effective in order to achieve the HCV management outcome. The purposes of this management and monitoring document were:

- 1) To ensure that the identified and assigned HCV areas are under protection and in a well managed state so that their HCV functions are well preserved,
- 2) To enhance the administration of the management and monitoring in the sense that the process carried out is more systematically according to the legal procedures.

### **Plan for HCV Monitoring and Regular Review of Data**

The basic programs and activities that fulfill the HCV management are in regular monitoring and review. The purpose of review is to measure the achievements, effectiveness, efficiencies, impacts, and sustainability of the programs. Thus, the purpose of monitoring is to evaluate whether the activities run as they are expected; whether the outputs of the process are as they were projected previously; and whether the resources investments (human, fund, time) are as they were planned.

Monitoring and review are aimed to a set of indicators as the key performance indicators and should be managed systematically, consistently, and well documented. The monitoring should be implemented regularly and it is dependent on the classifications of the activities and the target indicator to evaluate. The review should be conducted at the end of the management periodical plan, that is in the end of the third years (summative review) and every six months (formative review).

## Management and mitigation plans for threats to HCV areas.

The identified basic activities which are planned to run in order to achieve the basic targets for the enhancement and maintenance of the HCV areas are:

1. Identification, documentation and recondition of baseline HCV elements and that threatents.
2. Socialization to (management, worker, and local peoples) the HCV area about the existence and importance of protecting HCV areas.
3. Develop dialogue and facilitate people for make like-minded of HCV management.
4. Dialogue with stakeholders, especially government for increasing protecting HCV elements and areas.
5. Monitoring of land clearing activity.
6. Avoid/minimizing superficial of river with GAP (Group Agriculture Policy) which is land clearing until maintenance and harvesting.
7. Recondition and making the policy and procedure (SOP) which is supporting efectivity HCV management.
