Further information on your organisation's commitment to sustainable palm oil	<p>A plasma programme has been developed for the benefit of the communities surrounding the property. The company has appointed a smallholder management team to manage and to further develop the area of plasma. The team is also involved in the day to day management of the farmers. REA has its own conservation department (REA Kon) and takes serious efforts to conserve, restore and enhance high conservation value within the natural habitat on the plantation. REA Kon's mission is to conserve or enhance the original biodiversity landscape and to minimize any negative human impact. Its mission is a long term benefit for all parties concerned by not only monitoring and make assessments of species from different habitats but also to create awareness amongst the community regarding sustainable management of hunting and harvest. REA Kon also collaborates with private and public institutions.</p> <p>The on-going biogas project will offer a renewable alternative energy source. REA's mills will adopt sustainable practices by focusing on greenhouse gas (GHG) reduction from POME treatment and by that using power productively. REA's community development department (Comdev) conducts grievance handling and needs assessments of the surrounding communities. Comdev covers soft loans for farm projects (such as poultry and fish farms), provides road maintenance for nearby villages and encourages rice cultivation.</p> <p>REA recycles empty fruit bunches (EFB) by spraying them with effluent and reuses it as organic fertilizers. The EFB helps to control weeds, prevent erosion and maintain soil moisture. It has embarked on plastic, paper and aluminium cans recycling.</p>
