

Internal Hotspot Monitoring Weekly Report for 2023

Week 4 - March 2023

20 March – 26 March 2023
Malaysia & Indonesia

Overview

1. P&C 2018 & RSPO ISH Standard 2019 – Related Criteria
2. Weekly Analysis
 - i. Comparison to 2022: All Hotspots in MY & ID
 - ii. Comparison to 2022: Hotspots within RSPO Member Concession
 - iii. Weekly trend from the last 10 weeks
3. Weekly Hotspot Map
 - i. Hotspot Distribution Map
 - ii. Hotspot Distribution by Peatlands and Landuse Map
 - iii. Hotspot Persistency Map
4. Hotspots for Week 4 - March 2023
 - i. RSPO vs. non-RSPO member comparison
 - ii. Hotspots Distribution by States/Region
 - iii. Hotspots in RSPO members (State/Province)
5. ASEAN Weather Outlook

RSPO Principles & Criteria 2018

Related Criteria

There is **no use of fire for pest control** unless in exceptional circumstances

7.1.3

Criteria 7.1

The unit of certification **does not use open fire for waste disposal.**

7.3.3

Criteria 7.3

The unit of certification **establishes fire prevention and control measures** for the areas directly managed by the unit of certification

7.11.2

Criteria 7.11

RSPO ISH Standard 2019

Related Criteria

Smallholders complete training on best management practices (BMPs) for peat. The group has an **action plan to minimise risk of fire**, to apply BMPs for planting on peat and manage water systems in the certification unit.

4.4 MSA

Criteria 4.4

Smallholders **implement** the group's **action plan based on BMPs**, including **fire** and water management, and monitoring of subsidence rate for existing planting on peat.

4.4 MSA

Criteria 4.4

Fire is not used on the oil palm plot **for preparing land** or for **pest control**, nor open fire for **waste management** on the farm.

4.6 E,
4.6 MSA,
4.6 MSB

Criteria 4.6

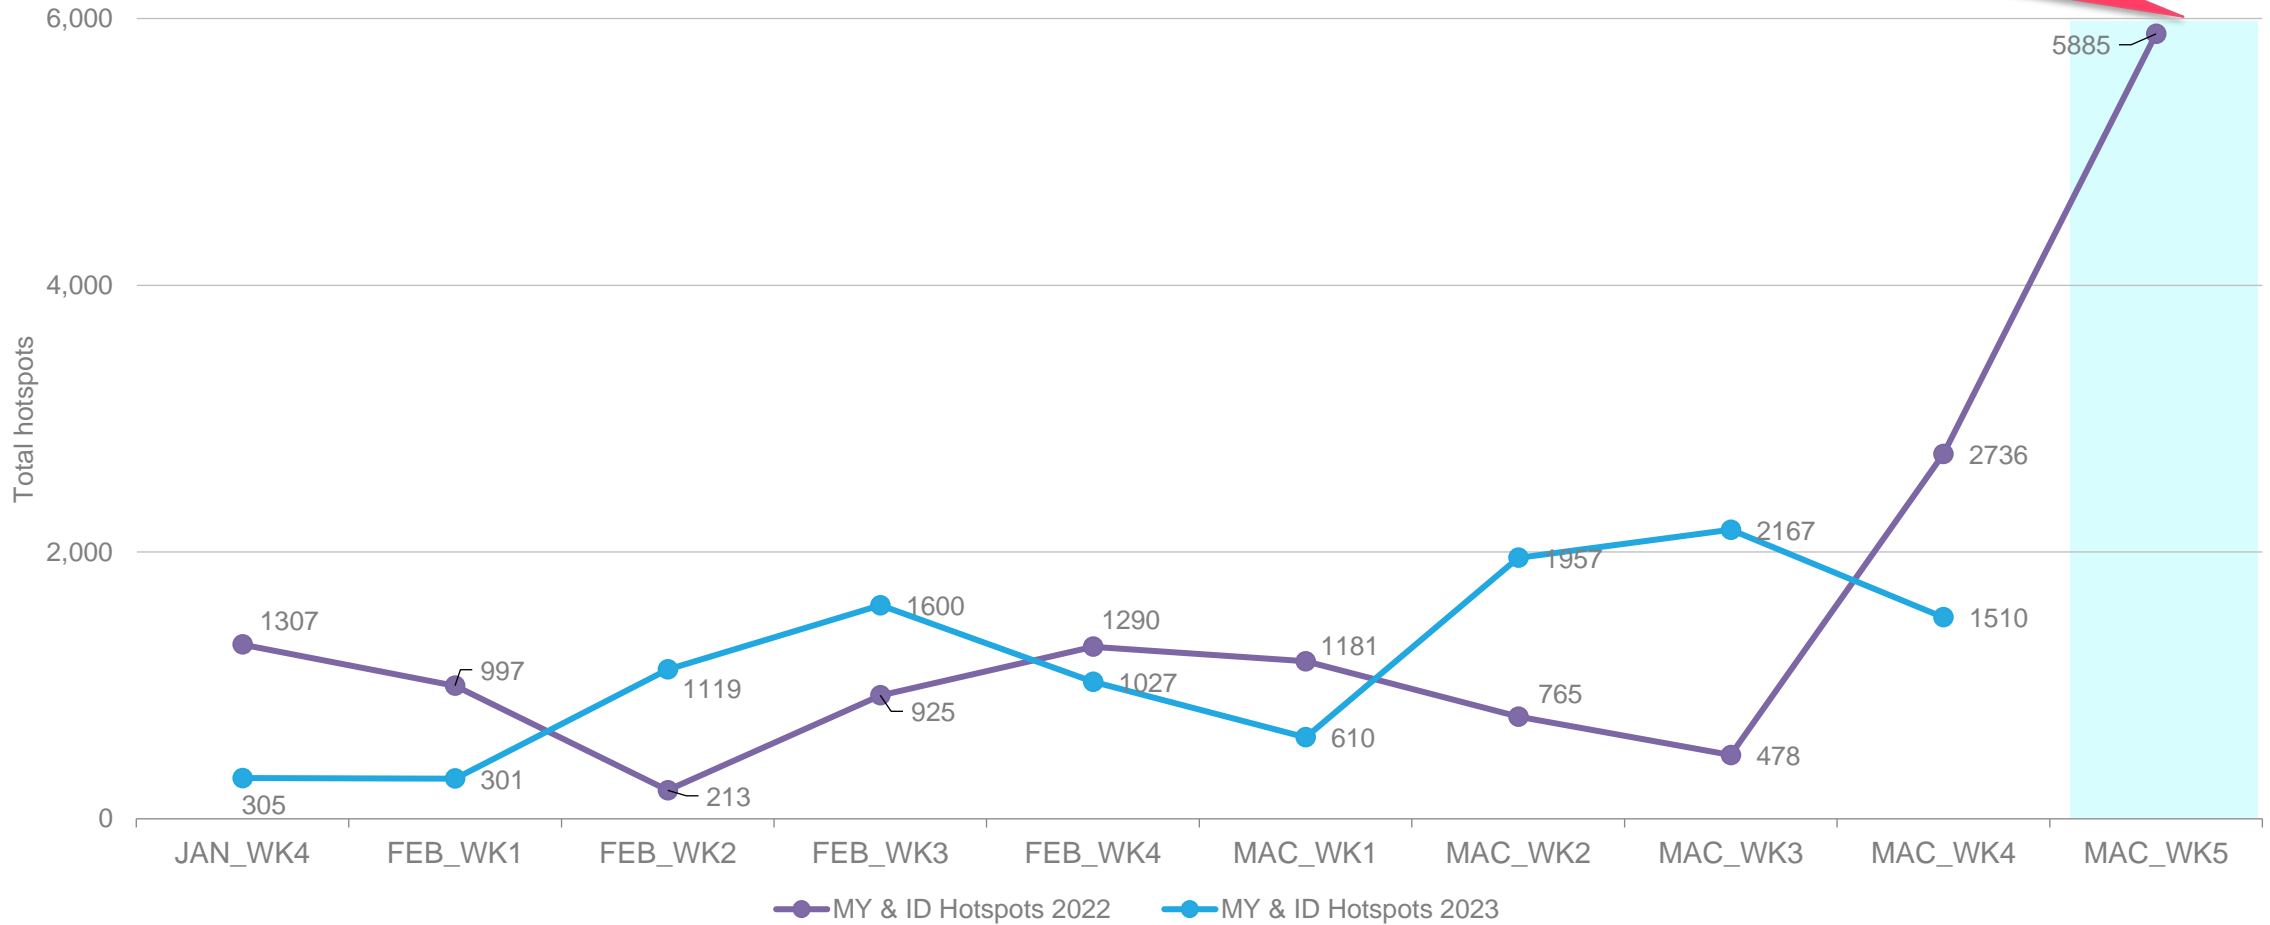

Weekly Analysis

Comparison to 2022 trend
Comparison to previous 10 weeks

Comparison to 2022: All hotspots

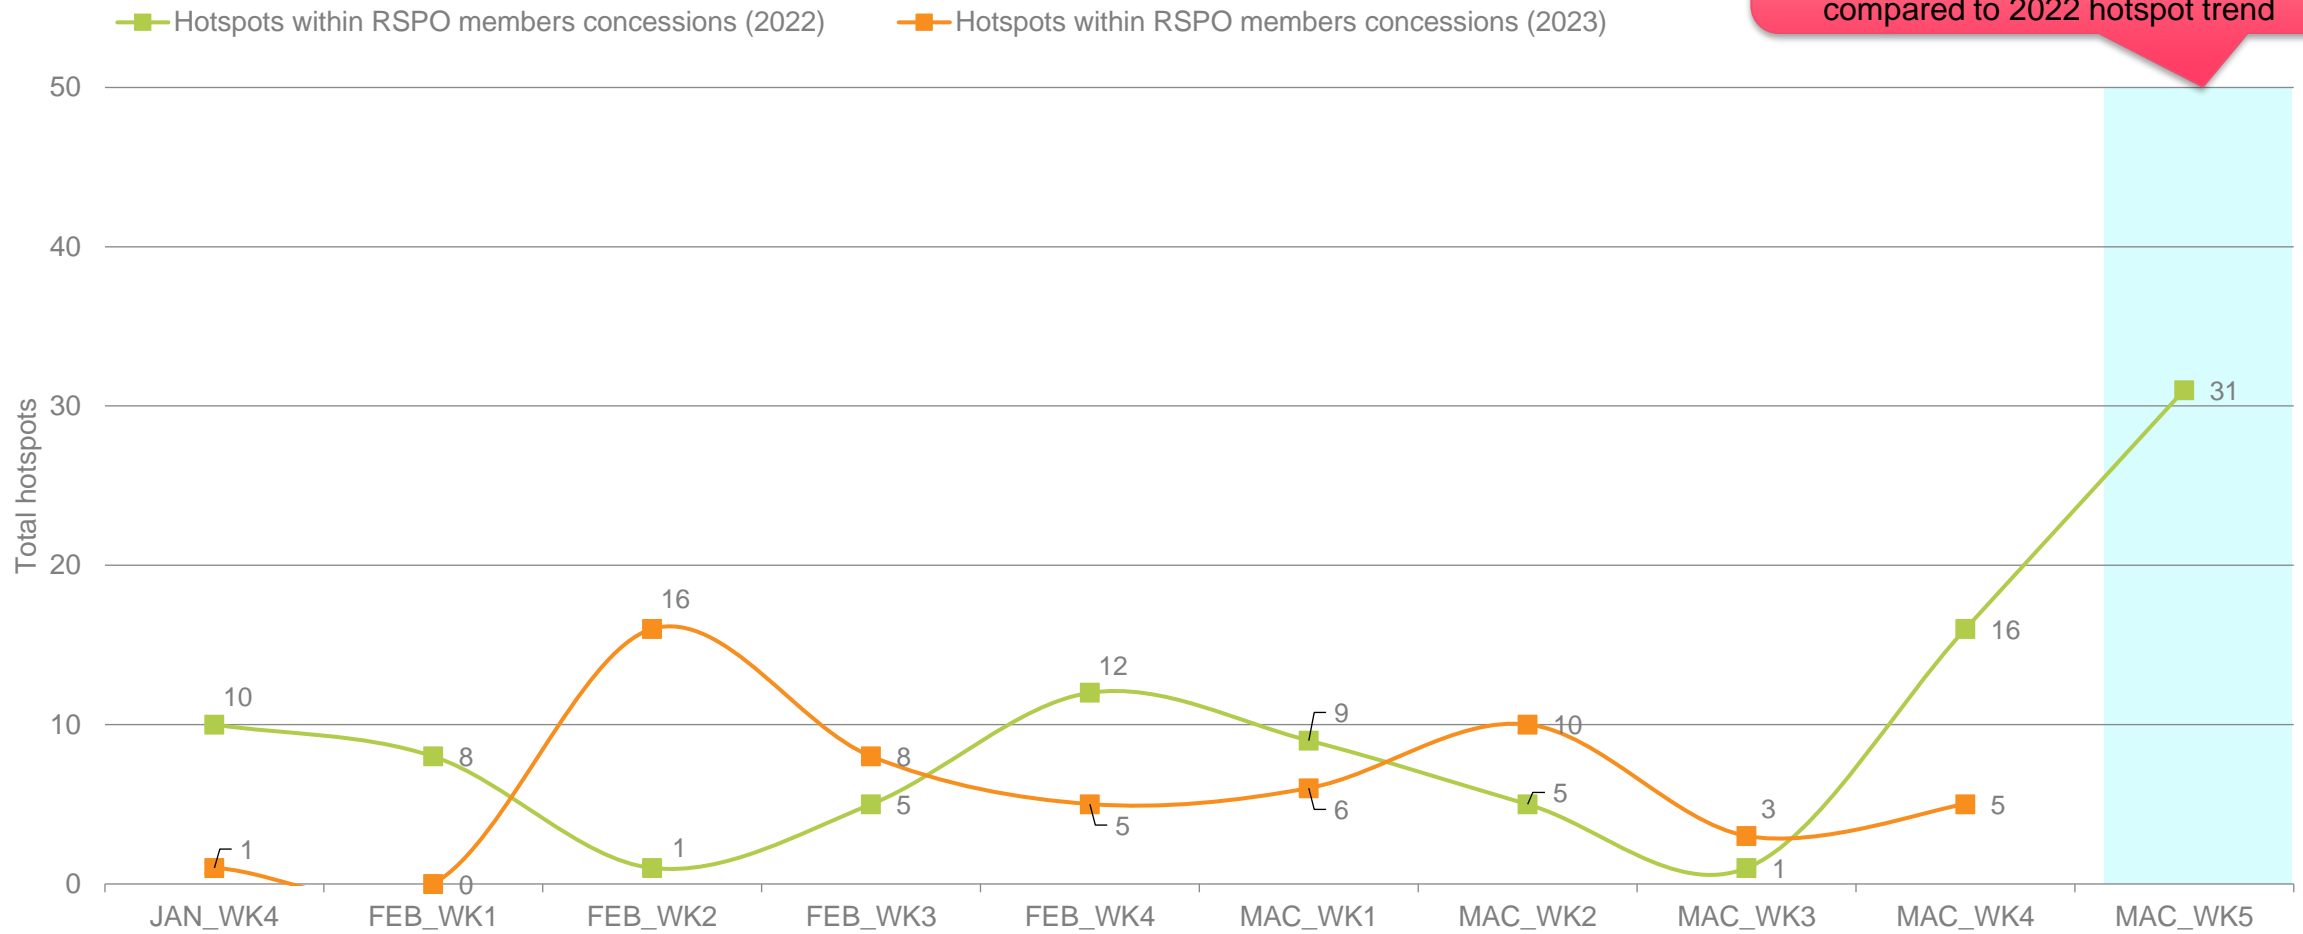

The number of hotspots for next week (March 2023: week 5) is predicted to be **increase** in the region as compared to 2022 hotspot trend

Comparison to 2022: Hotspot within RSPO Members Concessions

The number of hotspots within RSPO member is expected to be **higher** for next week (March 2023: week 5) as compared to 2022 hotspot trend

Weekly trend from last 10 weeks

Lower in hotspot count than previous week

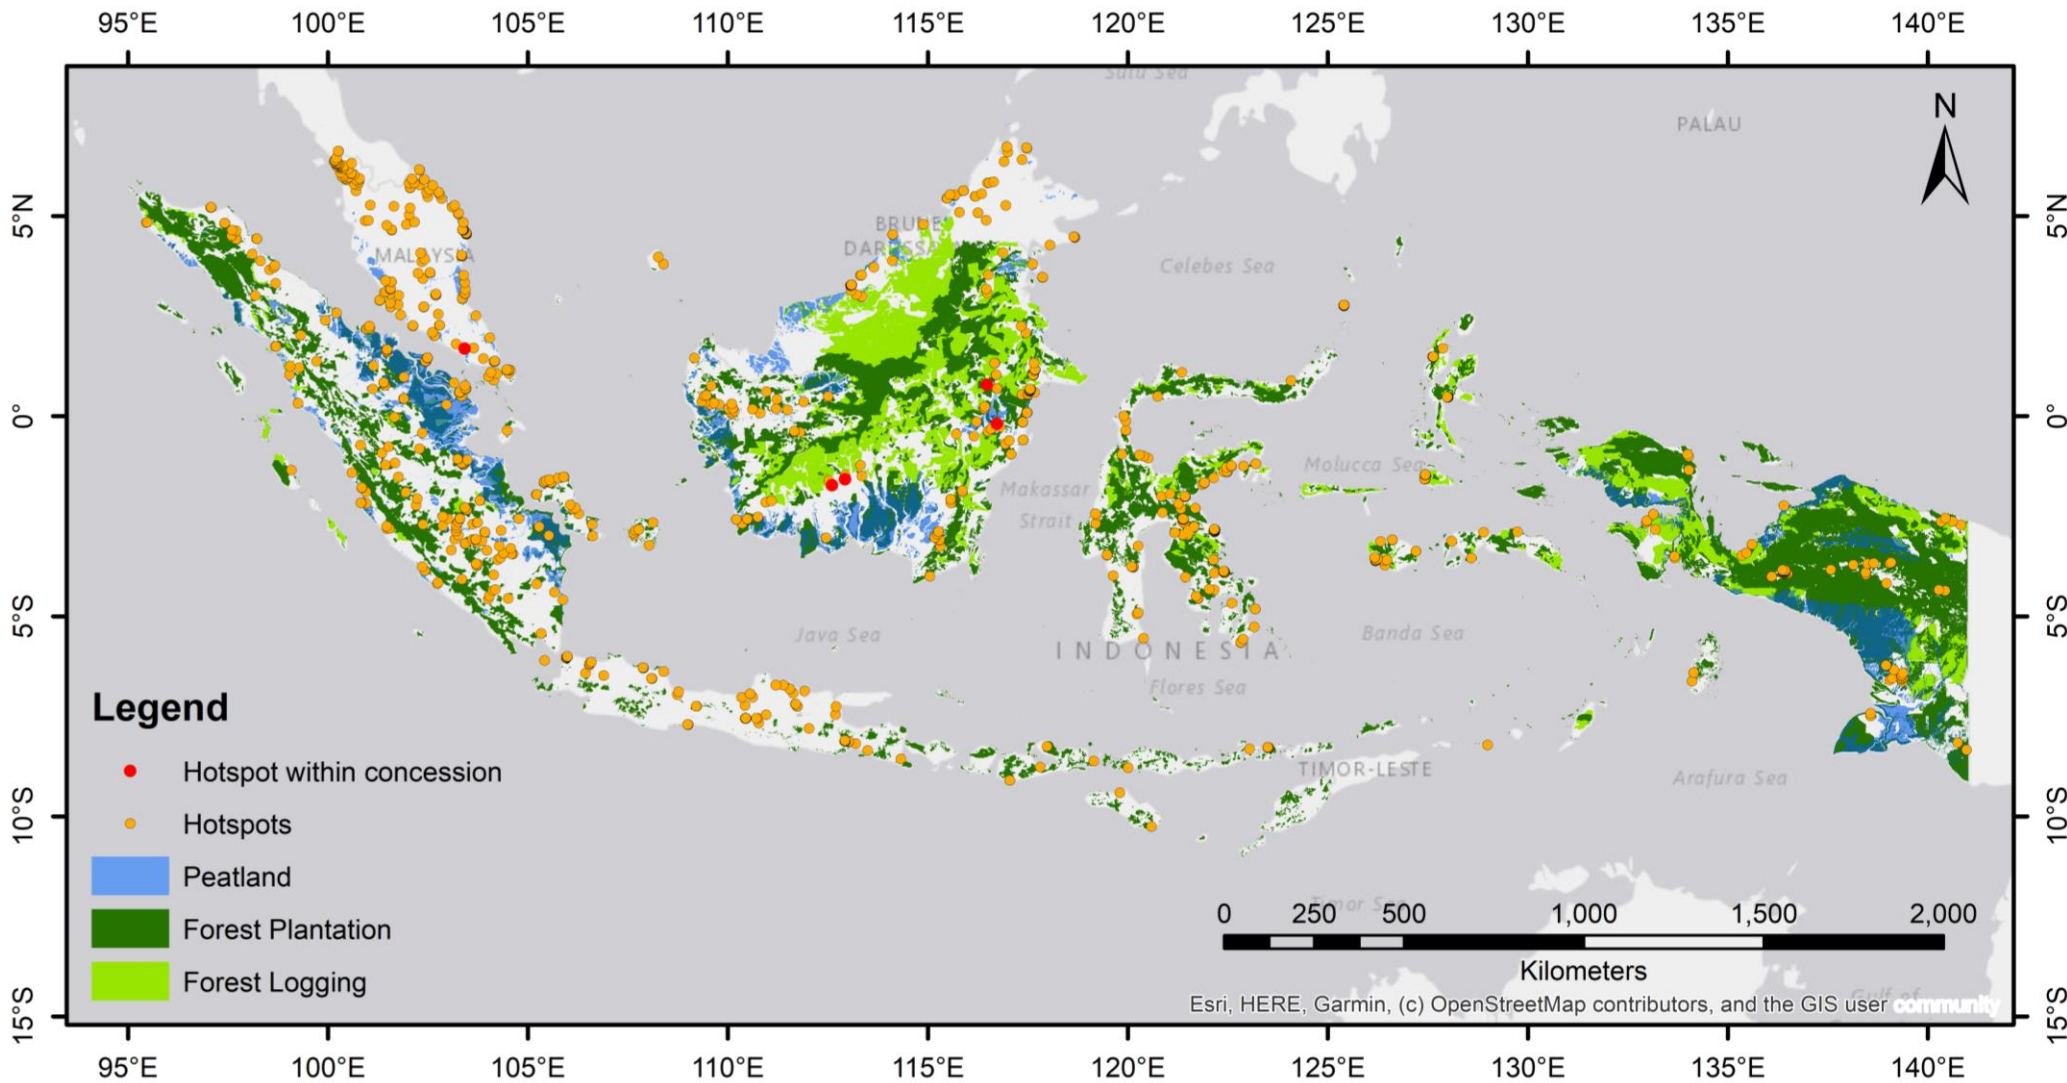

Weekly Hotspot Map

Malaysia & Indonesia

20 March 2023 – 26 March 2023

Hotspot Distribution by Peatland & Landuse Map

Legend

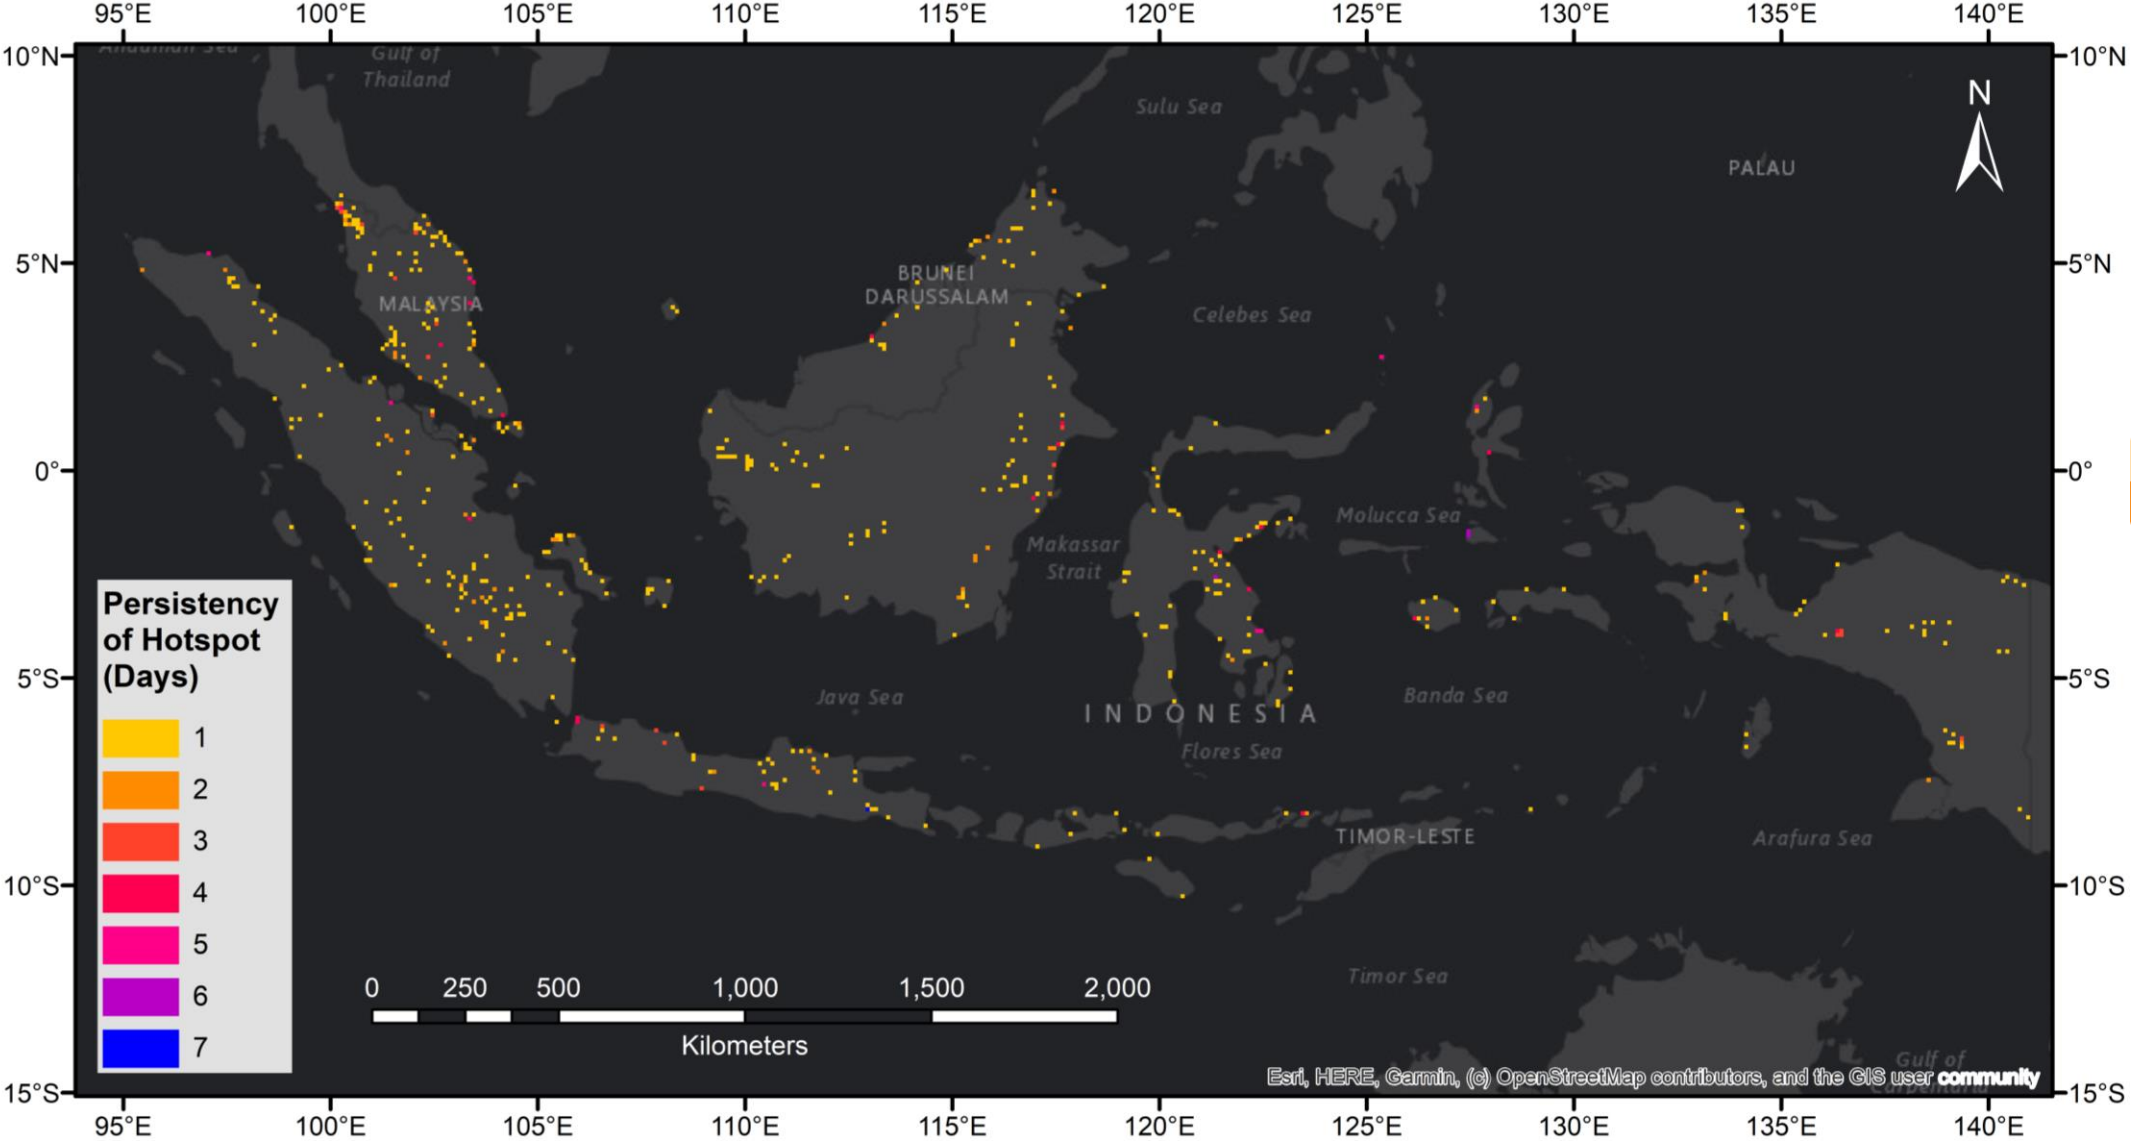

- Hotspot within concession
- Hotspots
- Peatland
- Forest Plantation
- Forest Logging

DATA	SOURCE
Hotspots	NASA FIRMS (https://firms.modaps.eosdis.nasa.gov/active_fire)
Peatland	World Resources Institute. "Peat lands". Accessed through Global Forest Watch on 17/11/2022. www.globalforestwatch.org
Forest Plantation	"Wood fibre concessions." Accessed through Global Forest Watch on 17/11/2022. www.globalforestwatch.org
Forest Logging	"Managed forest concessions." Accessed through Global Forest Watch on 17/11/2022. www.globalforestwatch.org

20 March 2023 – 26 March 2023

Hotspot Persistency Map

Each grid represents the number of days hotspots were detected within the 10km X 10km grid between 20 March 2023 – 26 March 2023

20 March 2023 – 26 March 2023

Week 4 - March 2023 Hotspot

Malaysia & Indonesia

RSPO vs non-RSPO comparison

Non-RSPO oil palm concession location data was derived from oil palm concessions dataset accessed through Global Forest Watch on 17/11/2022. www.globalforestwatch.org. The website states that this layer is a compilation of concession data from various countries and sources. The quality of these data can vary depending on the source. This layer may not include all existing concessions in a country, and the location of certain concessions can be inaccurate.

As such the data probably overstates the extent of oil palm plantations in some cases, as there are many licenses granted and the oil palm plantation has not been developed. In other cases, it may understate the extent of plantations as it does not take into account smallholders. Nevertheless, this appears to be the best data available of ALL oil palm in Indonesia.

The RSPO concession boundary data was overlaid with this data in the GIS and RSPO concessions were “clipped” out of this data, leaving only “non-RSPO” concessions.

Non-RSPO*: ~19,000,000 ha

RSPO: ~ 4,800,000 ha

Distribution of Hotspots by State in Malaysia

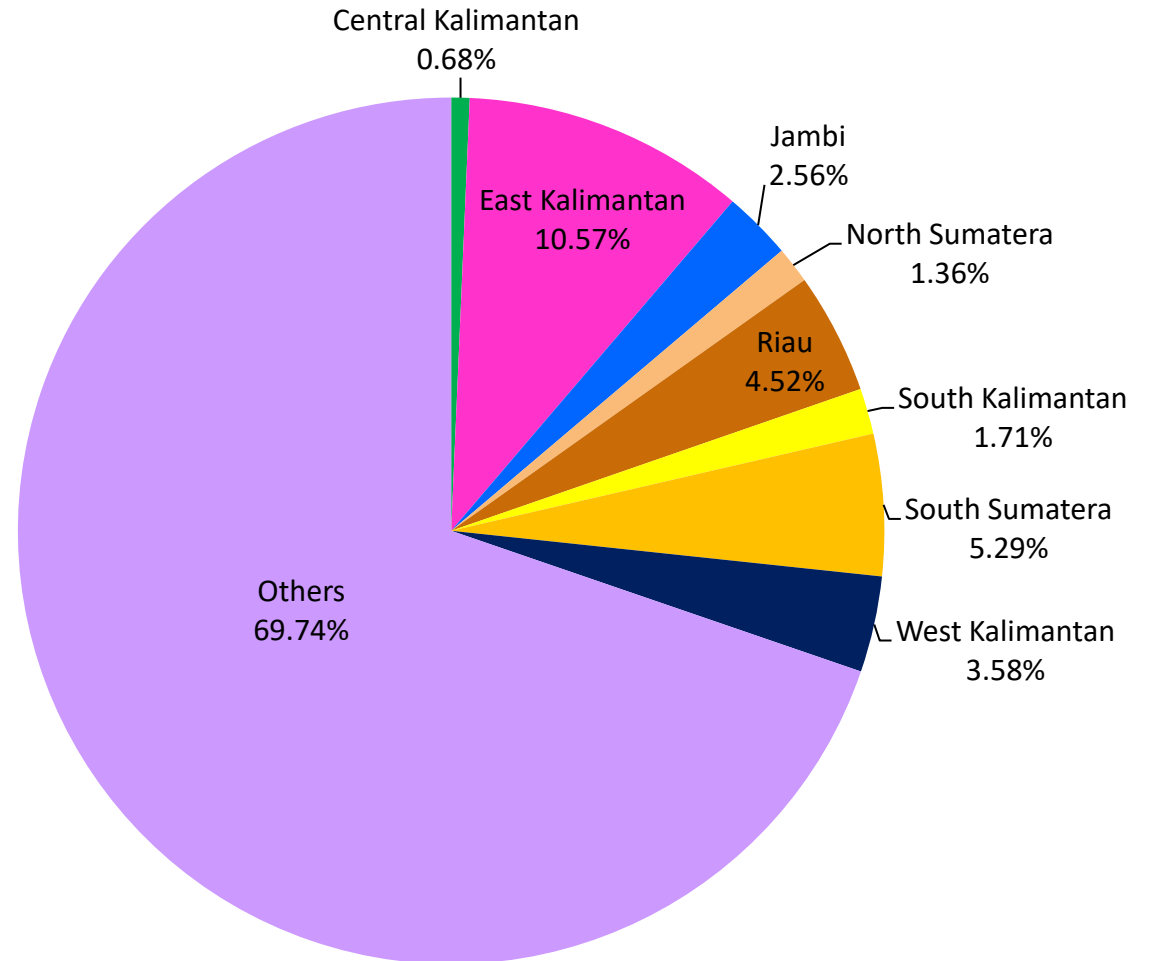

STATE	TOTAL
Johor	35
Kedah	38
N. Sembilan	6
Pahang	37
Perak	3
Sabah	37
Terengganu	57
Others	124
Total	337

Distribution of Hotspots by Region in Indonesia

REGION	TOTAL
Central Kalimantan	8
East Kalimantan	124
Jambi	30
North Sumatera	16
Riau	53
South Kalimantan	20
South Sumatera	62
West Kalimantan	42
Others	818
Total	1,173

Hotspots in RSPO members (State/Province)

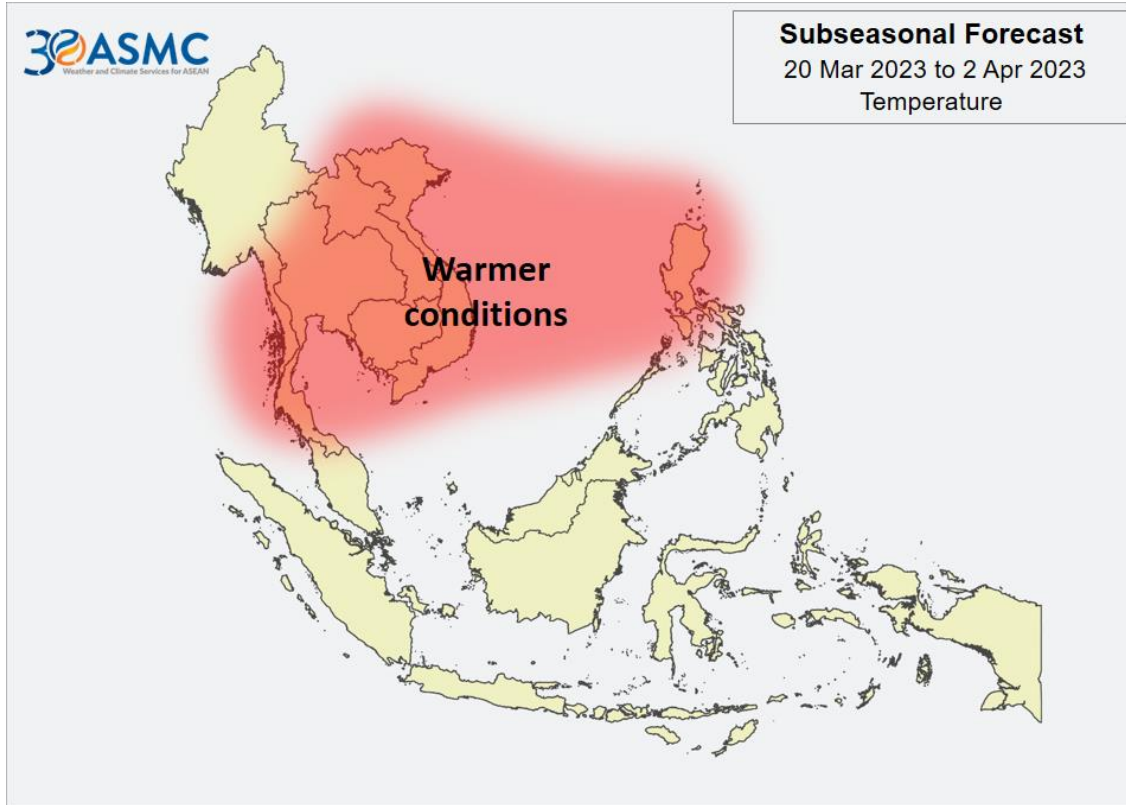

No. of Member/s	Date of Acquisition	District / Regency	Province / State	Country	No. of Hotspots	Total no. of Hotspots
1	22-Mar-23	Kutai Kartanegara	East Kalimantan	Indonesia	1	1
1	23-Mar-23	East Kotawaringin	Central Kalimantan	Indonesia	1	1
1	23-Mar-23	Bukit Batu	Johor	Malaysia	1	1
1	23-Mar-23	Katingan	Central Kalimantan	Indonesia	1	1
1	23-Mar-23	East Kutai	East Kalimantan	Indonesia	1	1
5				Total Hotspots		5

ASEAN Weather Outlook

Source: The ASEAN Specialised Meteorological Centre

Regional Weather & Haze Outlook

Alert Level

- LEVEL 0** Stay vigilant.
- LEVEL 1** Dry season for the Northern ASEAN region.
- LEVEL 2** Exceeding 150 hotspots in 2 consecutive days in Northern ASEAN with dense smoke plumes; dry weather persisting; and prevailing winds blowing from the Mekong sub-region. Increasing risk of transboundary haze in the region.
- LEVEL 3** Significant and persistent hotspot activities with widespread moderate to dense smoke haze observed over 2 or more consecutive days; dry weather persisting; and prevailing winds blowing towards ASEAN countries.

In the past few days, persistent dry weather over the Mekong sub-region has led to an escalation in the hotspot and haze situation there.

The current dry conditions are expected to persist in the coming days, with the prevailing winds forecast to blow from the northeast. Under these conditions, the elevated hotspot activity and widespread hazy conditions in the Mekong sub-region are likely to continue, with a high risk of transboundary haze occurrence in the sub-region.

The weather was fair and dry over much of the Mekong sub-region. Widespread moderate to dense smoke haze was observed to envelop eastern Myanmar, northern parts of Thailand, Laos and Vietnam. In the rest of ASEAN region, cloudy and isolated showers were mostly observed and the hotspot activity remained mostly suppressed.

For the next few days, persistent dry weather conditions are forecast over the most parts of northern ASEAN region, although some isolated showers are expected over the southern and eastern parts of the sub-region. Continued wet weather conditions are likely over other parts of the ASEAN region in the next few days, although drier weather is expected over Peninsular Malaysia and Singapore.

Alert by RSPO:

For the following week, RSPO Secretariat would like to recommend the following measures to Members:

Dry Season Area

(Northern ASEAN region; especially at Mekong sub-region)

- Please alert to the Fire Danger Rating System (FDRS) indicator board especially in the fire prone area
- Supply appropriate well-maintained fire mitigation tools (fire extinguisher, fire truck)
- Establish of fire break (wide road, vacant land) within the planted area
- Inform workers and communities about the fire drill procedure
- Minimize outdoor activities and stay hydrated if the haze season occurred
- If haze occurred, wear respirator mask if outdoor activities is necessary.

Integrated Fire Management
Training conducted by PT Austindo
PT Austindo Nusantara Jaya Agri

Wet Weather Area

(as forecast for Southern ASEAN region)

- High risk of surface runoff in the estate area which may result in erosion and landslide
- Stay vigilant of water level and keep informed on local news of the flood in high-risk area
- Tendency for the formation of road potholes, which may necessitate additional maintenance and repair costs.
- Stay inside during thunderstorms and blizzards. Stay off the landline phone and computer during a storm.
- Wear appropriate rain gear for employees working in the rain
