Actions for Next Reporting Period	
5.1 Outline actions that you will take in the coming year to promote the use of RSPO certified sustainable palm oil and oil palm products along the supply chain	
The actions that will be taken to promote sustainable palm oil will not differ a lot from what Remia has done during the past years. Within Remia every employee that is involved in the use of palm (as a raw material or end product) is aware of the sustainability issues. They know about the environmental and social criteria that the RSPO wants companies to comply to in order to make sustainable palm oil the norm. This knowledge is essential to have discussions with our suppliers and customers about sustainability. The buyers of Remia's end products are well informed about the options they have to support the goals of the RSPO. Remia actively promotes the use of sustainable palm oil. However, we do believe that especially the people who buy our products should be aware about the adverse effects of large scale palm oil productions. As soon as consumers are not only concerned but also prepared to pay extra for products that contain sustainable palm oil in stead of conventional palm oil (or fractions), the transformation to a more sustainable palm oil market will speed up.

Challenges

1 What significant economic, social or environmental obstacles have you encountered in the production, procurement, use and/or promotion of CSPO and what efforts did you make to mitigate or resolve them?

The RSPO certification of the supply chain models MB and SG has given Remia the option to manufacture products that contain physical sustainable palm oil, palm fractions and derivatives. Especially sourcing through the supply chain SG has become more expensive during the last year. In general we would not be surprised to see that such a price development will slow down the transition from Book & Claim to phisical sustainable palm use. Certain palm fractions and derivatives have not always been sufficiently available. A limited availability of physical sustainable palm products creates problems in times of additional use and demand. It happened more than once that SG palm products were not available when Remia had the flexibility to switch from conventional to sustainable productions.

2 How has your organization supported the vision of RSPO to transform markets? (e.g. Funding; Engagement with key stakeholders; Business to business education/outreach)

Remia started to use the book & claim system in 2011. Since that year Greenpalm certificates (now RSPO credits) have covered all own brand productions to every sales destination in the world. Every year we see a relative increase of the palm oil and palm fractions that are sourced from physical supply chains. Regarding our Time-Bound plan we are still on schedule.
