Challenges

1 What significant economic, social or environmental obstacles have you encountered in the production, procurement, use and/or promotion of CSPO and what efforts did you make to mitigate or resolve them?

The main obstacles to the production and promotion of CSPO are: - Perú does not have a national interpretation of the principles and criteria and does not have a technical working group that directs the actions to be carried out for palm producers. - The largest investments must be made in plantations and small palm producers have low incomes. - There is no certified company in the country where you can know a successful experience. - There are no people trained and trained in the standard of principles and criteria and the chain of custody system. The company has made multiple efforts to mitigate these obstacles within them we have: - Employees of the company have participated in training and technical visits to countries (Costa Rica, Colombia, Guatemala, Honduras, Ecuador) that already have certified companies, in order to have highly trained personnel and to know successful experiences. - The company has promoted and financed training for palm producers in order to learn the benefits of RSPO certification. - The company has participated in meetings convened by JUNPALMA to explain our implementation process.

2 In addition to the actions already reported in this ACOP how has your organization supported the vision of RSPO to transform markets in other ways? (e.g. Funding; Engagement with key stakeholders; Business to business education/outreach)

The company has initiated a process of training and awareness of the RSPO, addressed to all its stakeholders such as labor force, contractors and smallholders, all of the above focusing on environmental and social sustainability programs.
